

PROJECT AGREEMENT FORM

John Aldrie T. Baquiran
Software Developer

PROJECT OVERVIEW

Field	Details
Project Title	Web-Based School Clinic Health Record Management System
Client	Kurios Christian Colleges Foundation — Group 1
Group Members	1. Dave Justine Cabuhat 2. Maica Montes 3. Joanna Arandia 4. Nomar Peji 5. Adrian Hernando 6. John Villefrans Landicho
Total Project Cost	PHP 10,000.00

PAYMENT TERMS

Payment Stage	Amount	Status / Condition
Downpayment	PHP 5,000.00	Paid
Remaining Balance	PHP 5,000.00	Must be paid in full before system turnover and local installation

TECHNOLOGY STACK

Layer	Technology
Frontend	Native HTML, CSS, and Vanilla JavaScript
Backend	Core / Native PHP
Database	MySQL

SYSTEM WORKFLOW & DATABASE

Nurse (Clinic Staff) Flow

1. Logs into the system.
2. Searches for an existing student profile or registers a new student record.
3. Encodes patient visit details (complaint, temperature, symptoms, diagnosis).
4. Selects dispensed medicine (if applicable), which automatically deducts from the inventory stock.
5. Saves the consultation data securely to the database.

Admin Flow

1. Logs into the system.
2. Views the centralized dashboard and system notifications.
3. Monitors overall student health records, consultation histories, and medicine inventory.
4. Generates basic reports (e.g., number of clinic visits, common illnesses, and student health summaries).

Database Structure

The backend will utilize the following primary tables:

Table	Fields
Users	user_id, name, role, username, password
Students	student_id, name, age, gender, grade, section
Health_Records	record_id, student_id, diagnosis, treatment, date
Visits	visit_id, student_id, complaint, temperature, nurse_notes
Medicines	med_id, name, quantity, expiration

SCOPE OF WORK

The following features are included:

- **User Authentication & Roles:** The system supports Admin and Clinic Staff with designated access.
- **Patient Information Management:** Clinic staff can encode, update, and manage student personal and medical information.
- **Consultation Recording:** Personnel can record student visits, including symptoms, diagnosis, and treatment provided.
- **Basic Medicine Inventory & Auto-Deduction:** Staff may select a dispensed medicine during a consultation, which will automatically deduct the given amount from the medicine inventory.
- **Health Record Monitoring:** Storage and retrieval of student health records for monitoring past consultations.
- **Report Generation:** Basic reports such as number of clinic visits, common illnesses, and student health summaries.
- **Record Keeping:** A centralized database for all college student health records.

- **Notifications:** Basic in-system notifications to remind clinic staff of pending updates or incomplete records.
- **Responsive UI:** Custom color scheme based on the Kurios school logo, with a fully responsive layout.

SYSTEM LIMITATIONS

The following features are NOT included:

- **Accessibility:** Limited to local deployment via XAMPP; not accessible outside the institution or via cloud.
- **Communication Features:** No automated SMS or email notifications; alerts are limited to the dashboard only.
- **User Roles:** Supports only two roles (Admin and Clinic Staff) without advanced role customization.
- **Reporting Capability:** Reports are limited to basic summaries and do not include advanced analytics or graphical data visualization.
- **Security Features:** Standard password encryption is included, but no advanced measures such as multi-factor authentication.
- **Integration:** Not integrated with external hospital systems or other school management systems.
- **Medical Functionality:** Intended only for record management; does not support advanced medical diagnostics or prescription automation.

TURNOVER POLICY

The source code and XAMPP installation on the client's device will only be processed once the full payment has been settled.
